

QY Oil Filled Submersible Electric Pump

Feature

Electroplated anti rust shaft, stainless steel mesh bar
Durable and reliable bearing, full head design for the entire series
Stainless steel nameplate
SS304 screw, oversized handle
Overall sealing and mechanical sealing

Product Overview

The QY series oil filled submersible electric pump consists of a pump body, a seal, and an electric motor. The three-phase asynchronous motor is located at the lower part of the electric pump, and the pump body is located at the upper part of the electric pump. It has single-stage or multi-stage centrifugal and mixed flow impellers, radial guide vane structures, and axial flow impeller space guide vane structures. The integral mechanical seal or double end mechanical seal is used between the pump body and the motor as the dynamic seal. O-shaped oil resistant rubber sealing rings are used for static sealing at each fixed stop.

The electric pump shaft is treated with hard chromium plating, which can effectively improve the wear resistance and corrosion resistance of the shaft, and is also conducive to the maintenance and disassembly of the impeller.

This series of electric pumps is widely used in engineering, farmland, mining, construction sites, municipal environmental protection and other places. It can pump liquids without solid particles such as fibers, paper scraps, and mud, such as well water, river ponds, and other clean water. It is an ideal pumping equipment for agricultural drainage, water tower supply, and mine drainage, but it is not suitable for use in explosion-proof requirements.

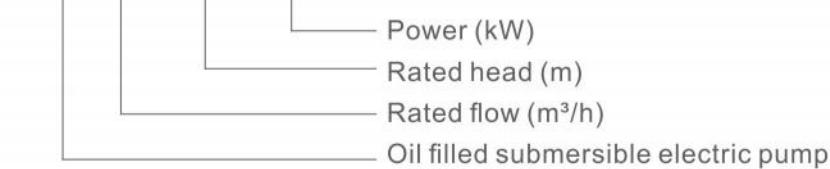

Operating Condition

The electric pump can operate continuously and normally under the following operating conditions:

1. The electric pump is suitable for clean water as the medium, and the medium temperature does not exceed 40°C
2. The pH value of the medium is between 6.5 and 8.5
3. The volume ratio of solid impurities in the medium shall not exceed 0.1%, and the particle size shall not exceed 0.2mm
4. The power frequency is 50Hz, the voltage is three-phase 380V, and the voltage fluctuation range is 0.9-1.1 times the rated value
5. Diving depth not exceeding 5m, not suitable for sewage, chemical drainage and irrigation

Model Definition

QY 15 - 26 - 2.2

Note: The cable line 8 meters marked with # is stainless steel barrel, stainless steel coupling, plastic pump head, cast iron impeller.

Marked with ▲ for plastic pump head, stainless steel shaft, stainless steel impeller (304 material), cast iron barrel

Marked * for cast iron pump head, stainless steel coupling, stainless steel inlet plate, stainless steel impeller (304 material)
